### 1.2.Model(s) list

None.

## 2. Test Information

### 2.1.EUT operation mode(s)

Mode #	Operating mode description	Test voltage
1	Charging + Camera Shooting	AC 230 V/ 50 Hz
2	Charging + Memory Playing	AC 230 V/ 50 Hz
3	Charging and Data Transmitting	DC 5 V(Notebook Computer Input AC 230 V/ 50 Hz)

Test worst operating mode	
Disturbance voltage at mains terminals	Mode 1
Radiated emission (30 MHz to 1 GHz)	Mode 2
Radiated emission (1 GHz to 6 GHz)	Mode 3
Voltage changes, voltage fluctuations and flicker	Mode 1

Remark: The worst measurement data and graphical presentation show in this report.

### 2.2.Special accessories and auxiliary equipment

Product Type	Manufacturer	Model No.	Serial No.
Notebook Computer	DELL	G3 3500	00342-36088-99832-AAOEM
Power Supply	DELL	HA130PM190	CN-0CY0JM-CH200-0B6-7405-A01

### 2.3.Configuration of system under test

(EUT: Smartphone)

## 2.4. General test conditions

### Environmental reference conditions

The climatic conditions during the tests are within the limits specified by the manufacturer for the operation of the EUT and the test equipment.

The climatic conditions during the tests were within the following limits:

Temperature	Humidity	Atmospheric pressure
15 °C – 35 °C	30 % - 60 %	86 kPa – 106 kPa

If explicitly required in the basic standard or applied product standard the climatic values are recorded and documented separately in this test report.

### Measurement uncertainties

Test Item	Uncertainty
Uncertainty for Disturbance voltage at the mains terminals	3.10 dB
Uncertainty for Disturbance voltage at the telecommunication terminals	4.06 dB
Uncertainty for Radiated emission (30 MHz to 1 GHz)	4.56 dB
Uncertainty for Radiated emission (1 GHz to 6 GHz)	4.22 dB

The overall measurement uncertainty of a measurement is defined as the range of which can be supposed that it contains the true value with a specified probability.

This probability is 95 % for the generally specified measurement uncertainty (so-called expanded measurement uncertainty).

The limits for emission measurements and the Test levels for immunity tests in the applied standards were defined taking into consideration the accuracy limits for measurement and testing equipment required by the Basic standards.

All measurement and test results of the EMC laboratory of Shenzhen TCT Testing Technology Co., Ltd. fulfil the requirements for measurement uncertainties according to the standards applied.

Decision rule for statement(s) of conformity is based on accuracy method specified in Clause 4.4.3 in IEC Guide 115:2021.

		<b>Average</b>
	1 to 18	30
Test method.....	In the case of a detachable feed horn, the radiated emission of the LO leakage within 7° of the main beam axis can be measured directly by a power measurement at the feed horn interface. If a suitable interface (typically types R120, C120) is available, a power meter or spectrum analyzer can be connected to the LNB via a suitable adapter. Due allowance shall be made for the feed losses between the available interface and the antenna flange.

<b>Test method.....</b>	Measurements were made in a 3/10-meter semi-anechoic chamber that complies to CISPR 16. Preliminary (peak) measurements were performed at an antenna to EUT separation distance of 3/10 meters with the receive antenna located at 1 to 4-meter height in both horizontal and vertical polarities. Final measurements (quasi-peak) were then performed by rotating the EUT 360° and adjusting the receive antenna height from 1 to 4-meters. All frequencies were investigated in both horizontal and vertical antenna polarity, where applicable.

## 6. Test Conditions and Results (Immunity)

### 6.1.General information

Performance criteria as defined by the standard	
Criterion	Description from standard
A	The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
B	During the application of the disturbance, degradation of performance is allowed. However, no unintended change of actual operating state or stored data is allowed to persist after the test. After the test, the equipment shall continue to operate as intended without operator intervention; no degradation of performance or loss of function is allowed, below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance.
C	Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions. A reboot or re-start operation is allowed. Information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

**6.6.2. Test results of observations description**

/ - Not performed or not required.

1 –No obvious change of function was found after the test.

2 –The function stopped during the test, but can be recoverable by itself operation after the test.

3 –The function stopped during the test, but can be recoverable manually after the test.

### 6.7. Broadband impulse noise disturbances for xDSI ports

Test requirement .....	BS EN 55035:2017+A11:2020			
Basic standard .....	BS EN 61000-4-6:2014			
Frequency range .....	150 kHz to 80 MHz			
Test level .....	<b>Broadband impulse noise disturbances, repetitive</b>			
	<b>Frequency (MHz)</b>	<b>(dBuV)</b>	<b>Burst duration</b>	<b>Burst period</b>
	0.150 – 5	107	0.7 ms	8.3 (for 60 Hz) 10 (for 50 Hz)
	5 – 10	107 to 36		
	10 – 30	36 to 30		
	<b>Broadband impulse noise disturbances, isolated</b>			
	<b>Frequency (MHz)</b>	<b>(dBuV)</b>	<b>Burst duration</b>	<b>Burst period</b>
	0.150 – 30	107	0.24 ms 10 ms 300 ms	/
Performance criteria .....	A(repetitive) B(isolated)			
Test set up description .....	<p>Measurements were made on a ground plane that extends 0.5-meter minimum beyond all sides of the system under test. The EUT was located 10cm above the reference ground plane and any associated I/O cables attached to the EUT were located between 30mm and 50mm above the ground plane. The indicated field was pre-calibrated prior to placement of the system under test.</p> <p>For the repetitive impulse test the disturbance shall be applied for a period of at least 2 min for each port under test.</p> <p>For the isolated impulse test a minimum of 5 isolated impulses shall be applied with an interval of at least 60 s between successive impulses.</p>

**6.8. Power frequency magnetic field immunity (PFMF)**

Test requirement .....	BS EN 55035:2017+A11:2020	
Basic standard .....	BS EN 61000-4-8:2010	
Test level .....	<b>Frequency</b>	<b>A/m</b>
	50/60 Hz	1
Performance criteria .....	A	
Test method .....	Measurements were made on a ground plane that extends 1-meter minimum beyond all sides of the system under test. The EUT was located 80cm above the reference ground plane and the indicated field was pre-calibrated prior to placement of the system under test.	
Ambient temperature .....	24.6 °C	
Relative humidity .....	54 %	
Air pressure .....	100.2 kPa	
Test location .....	2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China	
Test model(s) .....	KINGKONG MINI 3	
EUT operation mode .....	Mode 1, Mode 2, Mode 3

### 6.8.1. Test results for Power frequency magnetic field immunity

Point of application	Frequency (Hz)	Level	Results
X-Axis	50	1 A/m	Pass
Y-Axis	50	1 A/m	Pass
Z-Axis	50	1 A/m	Pass

### 6.8.2. Test results of observations description

/ - Not performed or not required.

1 -No obvious change of function was found after the test.

2 -The function stopped during the test, but can be recoverable by itself operation after the test.

3 -The function stopped during the test, but can be recoverable manually after the test.

### 6.9.Voltage dips, short interruptions and voltage variations immunity

Test requirement .....	BS EN 55035:2017+A11:2020		
Basic standard .....	BS EN IEC 61000-4-11:2020		
Test level .....	Voltage Dips		
	Frequency	Test level in % $U_T$	Duration
	50 Hz	0	0.5 cycle
	50 Hz	70	25 cycles
	60 Hz	70	30 cycles
	Voltage interruptions		
	Frequency	Test level in % $U_T$	Duration
	50 Hz	0	250 cycles
	60 Hz	0	300 cycles
	$U_T$ is the rated voltage of the equipment under test.		
Repetition rate .....	10 seconds		
Number of dips or interruptions .....	3		
Performance criteria .....	B & C		
Test method .....	The test allows estimating of the conducted immunity of electrical and electronic equipment connected to low-voltage power supply networks for voltage dips and short interruptions. The interference is applied on mains supply port by using a testing generator.		
Ambient temperature .....	24.6 °C		
Relative humidity .....	54 %		
Air pressure .....	100.2 kPa		
Test location .....	2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China		
Test model(s) .....	KINGKONG MINI 3		
EUT operation mode .....	Mode 1, Mode 2, Mode 3		
Test results .....	Pass
